**Handheld answers for aircraft NDE.** Zetec answers your inspection needs with three compact testers that have the most advanced eddy current and bond testing technologies. Each rugged instrument offers superior flaw detection with automatic features and a common user interface to save time.

**NEW MIZ®-21SR: The first multimode eddy current and bond tester in one.** Inspect structures, engine components, and wheels all with one handheld tester. Measure digital conductivity and coating thickness, too. Multiple display modes let you choose the most meaningful way to evaluate indications.

**NEW MIZ®-21B: The most advanced eddy current tester with dual-frequency capabilities.** Carry this ergonomically designed tester to detect cracks, corrosion, and heat damage. The MIZ-21B offers the industry's best signal-to-noise ratio with maximum sensitivity and signal resolution. Dual-frequency mixing eliminates unwanted variables to make signals easier to interpret.

**NEW S-21R: The power of a benchtop bond tester in a handheld package.** Here's the smallest, lightest, easiest way to detect disbonds and delaminations in composites and honeycomb materials. Offering both Resonance and Sondicator modes, the S-21R does more than a benchtop tester, yet costs less.

For complete information about these handheld NDE solutions, contact Zetec or your local representative today.
